QR-Code to enter the fLXmas-world

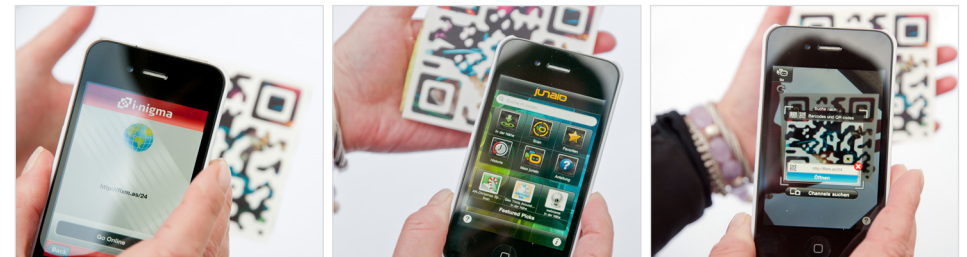

Instructions for "Magic Impressions"

Join us and experience the fusion of reality and virtuality in the fLXmas-world!

You just need a smartphone or tablet, the junaio app, a print-out of the QR-Code and off you go!

- **Supported devices** – iPhone (from model 3GS, version iOS 4.1), iPad 2 (from version iOS 4.1), smartphone Android (from version 2.1)
- **Installation of a QR-code reader** – There are a variety of QR-readers - Google Mobile (Goggles), junaio, n-igma, NeoReader,... Not all QR-readers support a direct link to the junaio app, so we recommend a direct installation of the junaio app.
- **Scanning of the QR-code** – The QR-code enables you to enter the fLXmas-world. Scan the QR-code with your QR-code reader and install the junaio app.
If you already installed the junaio app, open the junaio app.
In junaio press "scan" and hold the camera above the QR-code.

- **Opening the "flxm.as" Channel** – Open the proposed channel "flxm.as". Hover your smartphone / tablet over the QR-code. If the channel does not open automatically, it can also be manually opened - just enter "flxmas" in the search field (at the top in the junaio app) and select "open channel". Note: When installing junaio on the Android platform, please manually confirm the start.
- **More to discover** – Take some time to discover magical variants: Change the viewing perspective.
Touch the cat several times (in the first sequence).
Should more snowflakes accompany the cat? Just click once (or several times) on the snowflake icon.
- Have fun while watching and enjoy the magic moments in the "fLXmas-world".
